

# 5 Chapter Review

➔ Go to **Mastering Biology** for Assignments, the eText, the Study Area, and Dynamic Study Modules.

## SUMMARY OF KEY CONCEPTS

### CONCEPT 5.1

**Macromolecules are polymers, built from monomers** (pp. 67–68)

- Large carbohydrates (polysaccharides), proteins, and nucleic acids are **polymers**, chains of **monomers**. Components of lipids vary. Many monomers can form larger molecules by **dehydration reactions**,

➔ To review key terms, go to the **Vocabulary Self-Quiz** in the **Mastering Biology** eText or Study Area, or go to [goo.gl/zkjj9t](http://goo.gl/zkjj9t).

in which water molecules are released. Polymers can disassemble by the reverse process, **hydrolysis**. An immense variety of polymers can be built from a small set of monomers.

❓ What is the fundamental basis for the differences between large carbohydrates, proteins, and nucleic acids?

| Large Biological Molecules                                                                                                                                                              | Components                                                                                                                                                                                                                                                                                                                                       | Examples                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Functions                                                                                                                                                                                                                                                                                                                                                                                                                                             |
